Question 13 (Continued from Amendment 1)

Q: Can you provide a photograph of the wire-bound spiral number pads you are soliciting? There are different types of spiral binding available.

A: Thank you for asking about the spiral number pad BINDING. SCEL has found that pads bound in a “U” shape, with a small “u” coming down to almost touching the gap between two upside down large “U”s that reach up, to work best in the double

j-channels. See the photograph above. While the white covering on the thin wire makes it difficult to photograph, the focus of a player’s eyes remains on the jackpot amount and not on how the pads are bound.

On the left, in the photograph above, shows how the “U” shaped binding appears between the other pages of the pad. The middle pad illustrates the how the same type of pads are bound. The right pad has a black spiral binding.

The binding appears to be two pieces of wire in the \$/0 pad, but is actually the same type of binding as is used in the Blank/1 pad, showing the right side up small “u” shapes reaching around and almost overlapping upside down large “U” shapes where the pads are bound.

The third pad to the right with the black binding illustrates a true spiral binding. This binding type was found to snag on the double j-channels and become unbound quickly rendering the pad unusable. **SCEL does NOT wish to procure this type of spiral binding.**
